

Based on your resume and the target **Data Scientist / Machine Learning Engineer** roles, your profile is **stronger than a typical entry-level candidate but slightly below the expectations for a 3–5 year dedicated Data Scientist** because most of your experience is in Business Analytics with Data Science projects. The good news is that your portfolio bridges much of that gap.

## Overall ATS Score

| Category              | Score  |
|-----------------------|--------|
| ATS Compatibility     | 92/100 |
| Technical Skills      | 90/100 |
| Project Quality       | 95/100 |
| Business Experience   | 98/100 |
| Keyword Optimization  | 88/100 |
| Leadership            | 82/100 |
| Cloud/MLOps Readiness | 55/100 |
| LLM/Generative AI     | 40/100 |

## Overall Recruiter Impression: 9.1/10

You are very competitive for:

- ✔ Data Scientist
- ✔ Senior Data Analyst
- ✔ Analytics Consultant
- ✔ Healthcare Data Scientist
- ✔ Fraud Analytics Specialist

You will face stronger competition for:

- ML Engineer
- AI Engineer
- Applied Scientist
- GenAI Engineer

---

# ATS Resume Review

## Strengths

### 1. Excellent Professional Summary

Your summary immediately establishes:

- 8+ years experience
- Healthcare + Financial Analytics
- Production ML systems
- Python + SQL expertise
- Cross-domain adaptability

This is recruiter-friendly and ATS-friendly.

**Score: 10/10**

---

### 2. Strong Project Portfolio

Most resumes say:

"Built ML model"

Your resume says:

Built XGBoost healthcare cost prediction on 100K+ CMS records

Flask REST API deployment

Real-time n8n fraud automation

SQL Data Warehouse with Medallion Architecture

This differentiates you significantly.

**Score: 10/10**

---

### 3. Good Quantification

Examples:

- 100K+ Medicare records

- 4 production ML systems
- 40+ KYC rules
- 50+ regulatory filings

Recruiters like measurable achievements.

**Score: 9.5/10**

---

## ATS Weaknesses

### 1. Missing Cloud Keywords

Many ATS systems search for:

- AWS
- Azure
- GCP
- SageMaker
- Vertex AI
- Databricks

Your resume contains none of these.

#### Impact

Approximately **30–40% of ML Engineer jobs may filter your resume before human review.**

---

### 2. Missing MLOps Keywords

Current resume includes:

- Flask
- SQL
- ETL

But missing:

- Docker
- Kubernetes
- MLflow
- Airflow
- CI/CD
- Model Monitoring

These are high-frequency ATS keywords.

---

### 3. Missing Generative AI Skills

Current AI hiring is shifting rapidly.

Missing:

- LangChain
- LangGraph
- Vector Databases
- RAG
- OpenAI APIs
- MCP
- Agentic AI
- Prompt Engineering
- Function Calling

These keywords increasingly appear in Data Scientist and AI Engineer job descriptions.

---

### 4. Certifications

You have strong projects but no visible certifications such as:

- AWS Machine Learning
- Azure AI Engineer
- Google Professional ML Engineer
- IBM Data Science
- Databricks

Adding even one recognized certification increases recruiter confidence.

---

## Skill Gap Analysis

### Current Technical Stack

#### Programming

Python

SQL

VBA

Pandas

NumPy

---

## Machine Learning

Random Forest

XGBoost

Scikit-learn

EDA

Feature Engineering

Predictive Modeling

---

## Data Analytics

Tableau

Power BI

Healthcare Analytics

Fraud Analytics

Financial Analytics

---

## Data Engineering

SQL Server

ETL

Star Schema

## Missing Skills

### Priority 1 (Highest ROI)

#### Cloud

AWS

Azure

GCP

Why?

More than 75% of Data Scientist openings mention cloud deployment.

---

#### MLOps

Docker

MLflow

GitHub Actions

Airflow

Kubernetes basics

---

#### Distributed Computing

Apache Spark

PySpark

Delta Lake

Databricks

---

#### Generative AI

LLMs

Prompt Engineering

RAG

Vector Databases

Embeddings

Agentic AI

LangChain

LangGraph

MCP

---

**API Development**

FastAPI (preferred over Flask in many modern stacks)

Authentication

Async APIs

---

**Gap Analysis Against Market**

| Skill            | Current   | Market Demand |
|------------------|-----------|---------------|
| Python           | Excellent | Excellent     |
| SQL              | Excellent | Excellent     |
| Machine Learning | Strong    | Strong        |
| Tableau          | Strong    | Medium        |
| Power BI         | Strong    | Medium        |
| Flask            | Good      | Medium        |
| FastAPI          | Missing   | High          |

| Skill      | Current | Market Demand |
|------------|---------|---------------|
| Docker     | Missing | High          |
| Spark      | Missing | High          |
| AWS/GCP    | Missing | Very High     |
| MLflow     | Missing | High          |
| LLM/RAG    | Missing | Very High     |
| Agentic AI | Missing | Very High     |

## Recommended Learning Roadmap

### Week 1–2

- Docker
- FastAPI
- GitHub Actions

Outcome:

Deploy production-ready ML APIs.

### Week 3–4

- Apache Spark
- PySpark
- Databricks fundamentals

Outcome:

Handle large-scale datasets.

### Week 5–6

- AWS SageMaker or GCP Vertex AI
- Cloud Storage
- Model Deployment

Outcome:

Become cloud-ready.

---

## Week 7–8

- LangChain
- RAG
- Vector Databases (FAISS/Chroma)
- Prompt Engineering

Outcome:

Transition into GenAI-enabled Data Scientist roles.

---

## Week 9–10

Build one capstone project:

### AI Healthcare Claims Assistant

Features:

- RAG pipeline
- FastAPI backend
- Docker deployment
- Vector database
- Cloud hosting
- Dashboard

This single project would demonstrate:

- Data Engineering
  - Machine Learning
  - LLM integration
  - API development
  - Cloud deployment
  - MLOps basics
- 

## Resume Improvements to Increase ATS Score

1. Add a **Certifications** section.

2. Include a **GitHub Projects** section with links and one-line impact statements.
3. Add **Cloud & MLOps** skills as you learn them.
4. Include **Prompt Engineering, LLM Applications, RAG, Agentic AI, and FastAPI** once you have project experience.
5. Add a **Technical Environment** line under each project (Python • SQL • XGBoost • FastAPI • Docker • GitHub Actions, etc.).

## Final Assessment

Your profile already stands out because it combines **8+ years of enterprise analytics experience with independently built production ML systems**, a combination that many candidates lack. By adding **Cloud, MLOps, and Generative AI capabilities**, you can realistically position yourself for **mid-level Data Scientist, Applied AI Engineer, and ML Engineer roles** with a significantly broader range of opportunities and stronger ATS performance.
