

Job Search & Skill-Gap Analysis - Twinkle Grover

Target: Data Scientist | MNCs, Remote/Hybrid | ~Rs 80,000/month | Healthcare excluded

Top Job Matches

Company	Role	Location	Posted	Apply	Match	Why It Fits	CTC
Expertshub	Senior Data Scientist	Remote	Jun 10, 2026	Link	90%	Direct stack overlap: Python, SQL, XGBoost, Scikit-learn, Pandas, Tableau, Power BI, Plotly, Seaborn. 4-8 yr exp matches your 8 yrs. Core strength in predictive modeling.	N/A
Rulesiq	Data Scientist/ML Engineer	Remote	Feb 27, 2026	Link	65%	Good ML/EDA/feature engineering/Flask overlap, but requires Spark, Docker, Kubernetes, AWS, LLMs - notable gaps.	N/A
Sumeru	Data Scientist/Analyst	Remote/Hybrid	Jan 22, 2025	Link	60%	Solid SQL/Python/Pandas/Tableau/Power BI/ML fit, but broader analyst-level role; listing may be inactive (dated).	N/A
Somnetics	Data Scientist - Computer Vision & AI	Remote	Feb 28, 2026	Link	40%	Visualization/Python/SQL overlap exists, but core requirement is CV/Deep Learning (TensorFlow/PyTorch) - not in profile.	N/A

Excluded: ikshavku solutions (healthcare claims/clinical NLP role) - matches healthcare exclusion criteria.

Common Required Skills & Skill Gaps

Most common across postings:

- Python, SQL, Pandas/NumPy, Scikit-learn, XGBoost/LightGBM
- Tableau/Power BI, Plotly/Seaborn
- Cloud (AWS/Azure), Docker/Kubernetes
- Spark/Big Data, LLM/NLP & deep learning frameworks

Gap analysis (priority order):

- Cloud (AWS/Azure) - appears in 3/4 postings; highest priority, low-effort fix via certification
- Docker - moderate priority; existing Flask fraud API is one step from a containerized demo
- Spark/Big Data - appears in 2/4; Medallion Architecture/SQL Server work demonstrates equivalent thinking
- Deep learning/CV (TensorFlow/PyTorch) - low priority; only relevant to weakest-fit posting (Somnetics, 40%)
- LLM/GenAI - forward-looking; only Rulesiq required it explicitly

Market Demand & Recommendations

Market demand insights:

- Rs 80K/month (~Rs 9.6 LPA) is below typical market rate for 8 YOE in India's DS space - a non-constraint/strength
- Market is bifurcating: traditional ML/predictive roles (your strength, e.g. Expertshub) vs cloud-native/LLM/CV roles (Rulesiq, Somnetics)
- Sample is small (10 results, 4 reviewed in one session) - a snapshot, not a full market survey

Recommendations:

- Add a cloud platform (AWS or Azure) with a foundational certification - appears in nearly every JD
- Containerize an existing project (e.g. Flask fraud API) with Docker to close a recurring gap
- Reframe 'Senior Business Analyst' title toward 'Data Scientist' in outreach for better ATS/recruiter matching
- Add a short LLM/GenAI exposure project (e.g. classification/summarization with an open-source LLM)
- Search 'Fraud Data Scientist', 'Risk Analytics', 'Credit Risk Modeling' - closer matches to your strongest projects

Overall fit assessment:

Strong match for traditional predictive-modeling/fraud-analytics roles (best fit: Expertshub). Market is shifting toward cloud-native/LLM stacks where gaps exist. Compensation target is comfortably achievable; main barrier is closing cloud/MLOps/LLM gaps and title/branding alignment.
